

Mohammad Ghomi

DevOps & Infrastructure Engineer

PROFILE

DevOps & Infrastructure Engineer with 3+ years of hands-on experience in Linux and Windows administration, containerization, CI/CD, networking, virtualization, cloud infrastructure, load balancing, high availability, observability, and enterprise production environments.

Experienced in infrastructure operations, application deployment, automation, production troubleshooting, traffic management, virtualization, and supporting business-critical services.

CORE SKILLS

- Linux & Windows System Administration
- Docker & Kubernetes
- Terraform & Ansible
- Jenkins / CI/CD
- Git / GitHub / GitLab
- AWS / Azure / VPC
- VMware vSphere / ESXi
- Nginx / Apache / IIS / ARR
- Load Balancing & Traffic Distribution
- Reverse Proxy & SSL/TLS
- ASP.NET / .NET & Django
- Java / Maven
- REST APIs & Application Troubleshooting
- DNS / TCP/IP / VPN
- PostgreSQL / SQL Server / MongoDB / Redis
- Prometheus / Grafana / Loki / Jaeger
- High Availability & Infrastructure Architecture

PROFESSIONAL EXPERIENCE

DevOps / Infrastructure Engineer — Inspection Organization

- Managing production Linux and Windows infrastructure
- Deploying and maintaining Docker and containerized workloads
- Managing VMware vSphere / ESXi virtualization infrastructure
- Managing IIS, Nginx, reverse proxy, and SSL/TLS infrastructure
- Implementing and maintaining production load balancing and traffic distribution
- Supporting high-availability infrastructure and business-critical services
- Managing database and Redis infrastructure

- Monitoring, troubleshooting, and incident analysis
- Enterprise networking and infrastructure design
- CI/CD implementation and infrastructure automation
- Application deployment and production troubleshooting
- Supporting backend applications and services
- Working with ASP.NET / .NET and Django-based applications
- Supporting Java applications and Maven-based build workflows
- Troubleshooting application, network, and infrastructure-related issues

INFRASTRUCTURE PROJECTS

- Enterprise Infrastructure Architecture
- Production Load Balancing & High Availability
- Kubernetes Platform
- Terraform & Ansible Automation
- Jenkins CI/CD
- VMware Virtualization Infrastructure
- SQL Server High Availability
- Monitoring & Observability
- Mail Server Infrastructure
- WOPI / Office Online Infrastructure
- Network & VPN Infrastructure

APPLICATION & BACKEND KNOWLEDGE

- ASP.NET / .NET
- Django
- Java
- Maven
- REST APIs
- Application Deployment
- Application Troubleshooting
- Integration of applications with databases, caches, and infrastructure services

TECHNICAL KNOWLEDGE

- LPIC-1 / LPIC-2 level Linux administration knowledge
- Enterprise networking and infrastructure concepts
- VMware virtualization and VM infrastructure
- Reverse proxy and traffic management
- High-availability architecture
- Production monitoring and troubleshooting
- Build and dependency management with Maven

EDUCATION

Bachelor's Degree

ACHIEVEMENT

Recognized for strong performance in a Quera technical examination/competition.

LANGUAGES

- Persian — Native
- English — Intermediate
